

Reception Maths Homework

This week in Maths we have been learning to identify patterns. We have talked about repeating patterns and how we can continue these or create them. A repeating pattern is repeated over and over, for example, red, yellow, red, yellow and so on.

Below are some examples of patterns you could try and create at home. You can use anything you like to create a repeating pattern, for example, fruit, leaves, or bricks.

What can you find to make a repeating pattern? Please take a photo and send it to us on Dojo!

We can't wait to see what you achieve!
