

Reception Maths Homework

This week in Maths we have been exploring one more and one less. Children have continued to count, subitise and compare as they explore one more and one less of numbers up to 5.

Using objects or toys from around the house give your child a number from 1-5. Allow your child to count out the correct number of objects to match your given number. Find one more and one less of the number by adding an object or taking one away. Children to identify how many objects they have now by counting their objects. Can they show the number on their fingers?

E.g. '1 more than 2'.

Another activity you can do with your child is make number cards 1 to 5. Can your child put them in the right order starting with the number 1. Can children point to the correct number when given an instruction? For example, can you point to the number that is one more than 1?

Please send any photos to our Class Dojo! We can't wait to see what you get up to!
